

A decorative pattern of hexagons in various shades of blue and cyan. Some hexagons contain icons: a lightbulb, a thumbs up, a smartphone, a magnifying glass, a gear, and a speech bubble. A large, solid cyan hexagon is positioned to the left of the title.

Plan-design Goal Recognition with Autoencoding Transformer for the Cerbrec Modeling Platform

Goal Reasoning Workshop ACS 2021
Presented by David R. Winer, PhD

Outline

- Plan-design Goal Recognition
- Cerbrec Modeling Platform
- Applied/Motivating Task
- Learning Approach
- Prediction Generation Approach
- Results/Conclusions
- Live demo if extra time!

What is Cerbrec?

Cerbrec, no-code AI development platform on the cloud:

-  No-code develop AI
-  No-code edit pre-built AI from latest research papers
-  One-click deploy AI on the cloud

Cerbrec makes AI development easier to understand and more productive

David Winer and Garrett Wang (paper's authors) are the co-founders

<https://www.cerbrec.com>

Constraint Satisfaction

Constraint Violation

A

B

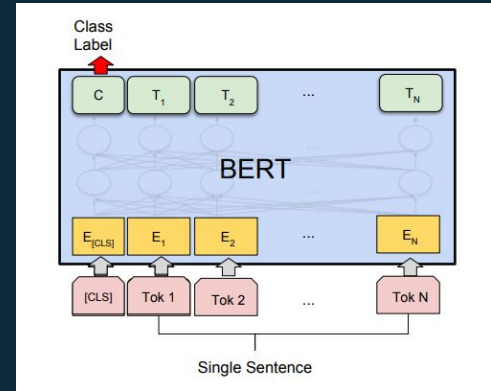

Motivating Task

Recommend context-sensitive
edit(s) that bring user's current
plan to a likely goal state

Autoencoding Transformer (pretraining)

- Adapt BERT architecture
- Instead of lexicographic vocab, use vocabulary of binding links
 - Vectorize Cerbrec plans as “sentences”
- Instead of MLM, do *Masked Binding Modeling* (MBM)
 - Makes more sense than an autoregressive approach like GPT because plans are partially ordered
- Novel adaptation to encode relative positionality

Tasks

Results

- Results not ready yet.
- Currently validating fine-tuning approach:
 - Trying different perturbation policies
 - Training sets: pairs of <goal, perturbed> plans
- Next: validate on user interaction traces
 - Define perturbed as when user reaches error state
 - Define goal as when user reaches non-error state within n steps
- Do users like the recommendations?
 - Compare approaches to baselines

Conclusion

- Plan-design goal recognition
- Cerbrec modeling platform
- Novel autoencoding adaption
- Novel fine-tuning task to learn action selection

Conclusion
